## NATIONAL ORGANIZERS

*Without the valued input of the National Organizers from the participating European countries and the European Schools there would quite simply be no annual EU Contest for Young Scientists.*

They organise the national young scientist competitions and then choose the best from their respective contests to represent their country at the European contest. All this requires some considerable effort. By way of illustration Germany, Ireland and Russia provide just three examples. Annually the German National Organizer has to handle some 5000 aspiring EU Contest applicants and the Irish National Organiser has to deal with nearly 500. While Russia has to handle a staggering 20,000 entries each year.

All National Organizers employ their different methods of scientific selection. Often the entire process which may require the organization of regional level competitions takes up most of the year.

To find out more about national competitions that lead to the EU Contest for Young Scientists, please find below a complete listing of all the National Organizers involved
